

Pink Paper

V 2.0

August 1st, 2021

FatCake.Club

Introduction

The FatCake Pink Paper aims to educate the reader on our Vision, Strategy, and Roadmap. Below we illustrate, in detail, our redistribution mechanism.

With a first-of-it's-kind rewards system, our unique tokenomics allows for a truly sustainable passive income.

Redistribution

FatCake is the next evolution of a yield-generating contract on the Binance Smart Chain (BSC). Reflections of every transaction are rewarded in PancakeSwap's native token, CAKE. A major utility token that allows holders to farm, stake, trade, or reinvest into FatCake to increase your hourly rewards!

Every Transaction is charged a 15% tax, which is split into three separate functions.

10% is converted into CAKE and distributed to all token holders

3% is also converted to CAKE and sent to a marketing wallet for lifetime marketing/airdrops/and giveaways

2% is directly injected into the Liquidity Pool

Behind The Scenes

The Fat Cake token is based on a Dividend-Paying Token Standard, which means all the CAKE that the contract collects from taxes will be split equally and proportionally to all tokens holders. The contract keeps track of all token holders, as well as an index into the array for processing.

Each time a transaction is processed, the contract checks for the amount of withdraw-able dividends each holder has acquired. If the dividends surpass the minimum threshold for auto-claims, the contract will automatically distribute CAKE as the holder's reflections.

This system is fully automated and does not add the minimal gas fees proportional to value transferred. The number of holders processed through each transaction is dynamic and based on the transaction size. Holders will receive dividends from the queue based on their position in the array. It is a fair and fully automated system. There is no minimum holding amount to recieve rewards, however, if your rewards do no exceed the minimum to cover gas fees, the contract will save your reflections until the threshold is met or exceeded.

Security

Liquidity has been locked automatically after pre sale, through DxSale for a minimum of 1 year. Development wallet has also been locked through DxSale manually for 1 year, with 10 vestment periods to allow for milestone rewards to early shareholders, as well as the addition of staking pools, hotpools, and casino integration.

Token Information

Following the small 200 member pre-sale, Fat Cake was listed onto the exchange, PancakeSwap. Available for purchase by trading USDT, BUSD, BNB, and many others.

Network: Binance Smart Chain (BEP20)

Ticker: FATCAKE

Contract: 0xb7dba4c673bedb174dc3ff7ec65d17c863d39b16

Decimals: 18

Other token features include Anti-Whale mechanics, and max transaction limits, preventing whale manipulation and large sell-offs. Fat Cake is taking every preventative measure to ensure the safety of our investors.
